WELCOME MESSAGE

Since the Covid-19 pandemic is over, we are now starting to sense a possible return to normalcy. We finally have the opportunity to meet in-person to share our knowledge and understanding on some health issues. Some of us find that this new phase is not easy to deal with because the pandemic has changed our life in so many ways. However, some important health issues particularly for children still remain.

In Indonesia, the health promotion for young patients with neurosurgical illness still deserve a lot of attention. Indonesian Committee for Pediatric Neurosurgery has been arranging some neurosurgery activities for children's health. As experts who deal with pediatric patients, we strongly believe that a good quality of children's health play an important role in the future. Therefore, we need to pay attention to the growth of their neurodevelopment and skills. It is important now for us to meet and to hold an offline forum, a course to advance the care of children with neurosurgical diseases and disorders.
